

UNE 58451 – Training Programmes for Operators of Forklift Trucks Up to 10000 Kg

Who can be certified?

UNE 58451 establishes the minimum requirements for any training programme for operators of forklift trucks up to 10000 kg. It applies to the contents, conditions, evaluation criteria and other elements that must be taken into account in the training of operators. It includes the contents for supervisors and trainers.

It is a standard with a technical scope, as its design is aimed at the standardisation of this type of training activity, ensuring both the quality of the training and its recognition.

Benefits of UNE 58451

This certification helps to distinguish the training company as a specialist in the sector through compliance with the requirements of the standard. It also guarantees the quality of the certificates issued to operators.

UNE 58451 provides clients (both companies and individuals) with a seal of guarantee and confidence that is essential in the occupational safety sector. What's more, it is recognised by interested parties, such as public administrations, companies and workers related or involved in this activity.

Why Applus+ Certification?

Applus+ Certification is an independent entity of recognized prestige, both nationally

and internationally, which aims to help organizations achieve their commitment to continuous improvement. The global certification entity model allows us to achieve excellent results in the process of evaluation and certification of conformity in training programmes.

The technical and personal competence of our auditors, fully recognized specialists in each sector of activity, focus their efforts on ensuring that the evaluation process provides maximum value, assessing compliance in each of the centres and organizations in this sector.
